```

Replace Autoprefixer `browsers` option to Browserslist config.

Use `browserslist` key in `package.json` or `~.browserslistrc` file.

Using `browsers` option can cause errors. Browserslist config can be used for Babel, Autoprefixer, postcss-normalize and other tools.

If you really need to use option, rename it to `overrideBrowserslist`.

Learn more at:

<https://github.com/browserslist/browserslist#readme>
